

For Everything You Do Outdoors

SEIKO SPORTSWEAR
color enhanced vision

Transitions® SOLFX™

Introducing the photochromic Rx sun lens designed to enhance color visual performance for all types of outdoor activities. From running, hiking or walking to just sitting back watching the action, Seiko Sportswear Transitions SOLFX lenses offer enhanced color recognition, contrast and depth perception by adapting to varying lighting conditions.

Seiko Sportswear Transitions SOLFX lenses are a perfect choice for people who are looking for more than what their fixed tint sunwear provides. Their light green-gray color tint indoors changes to 85% sunglass shade outdoors when exposed to UV light. This green-gray color space allows true color recognition, providing the wearer with clearer, more vivid "color enhanced vision."

Sportswear Transitions SOLFX lenses include all Seiko patented 100% back surface free-form progressive lenses, new Wrap Tech 1.67 free-form high base single vision lenses for Seiko Wrap Tech eyewear, and aspheric 1.67 single-vision lenses. A wide variety of flash, solid and gradient mirror coatings are also available.

SEIKO

Light green-gray color tint in low light conditions

70% light transmission

Sunglass dark green-gray color tint in full sun

15% light transmission
